

Printer Colour Test Sheets

If you are using an inkjet printer that uses piezoelectric technology like an Epson or Brother, these sheets will help you deal with airlocks that may impair your printer's colour print quality. These airlocks may be caused by you running the printer bone dry to complete a printing project. These test sheets can be used as an additional method to achieve the same goal along with using the printer's "cleaning" routine..

Select the page that represents the colour that isn't coming through properly on your documents. Then print this page by selecting "Print Current Page" in the Print dialog box. The airlocks should be clear when there isn't any banding or streaking in that colour/

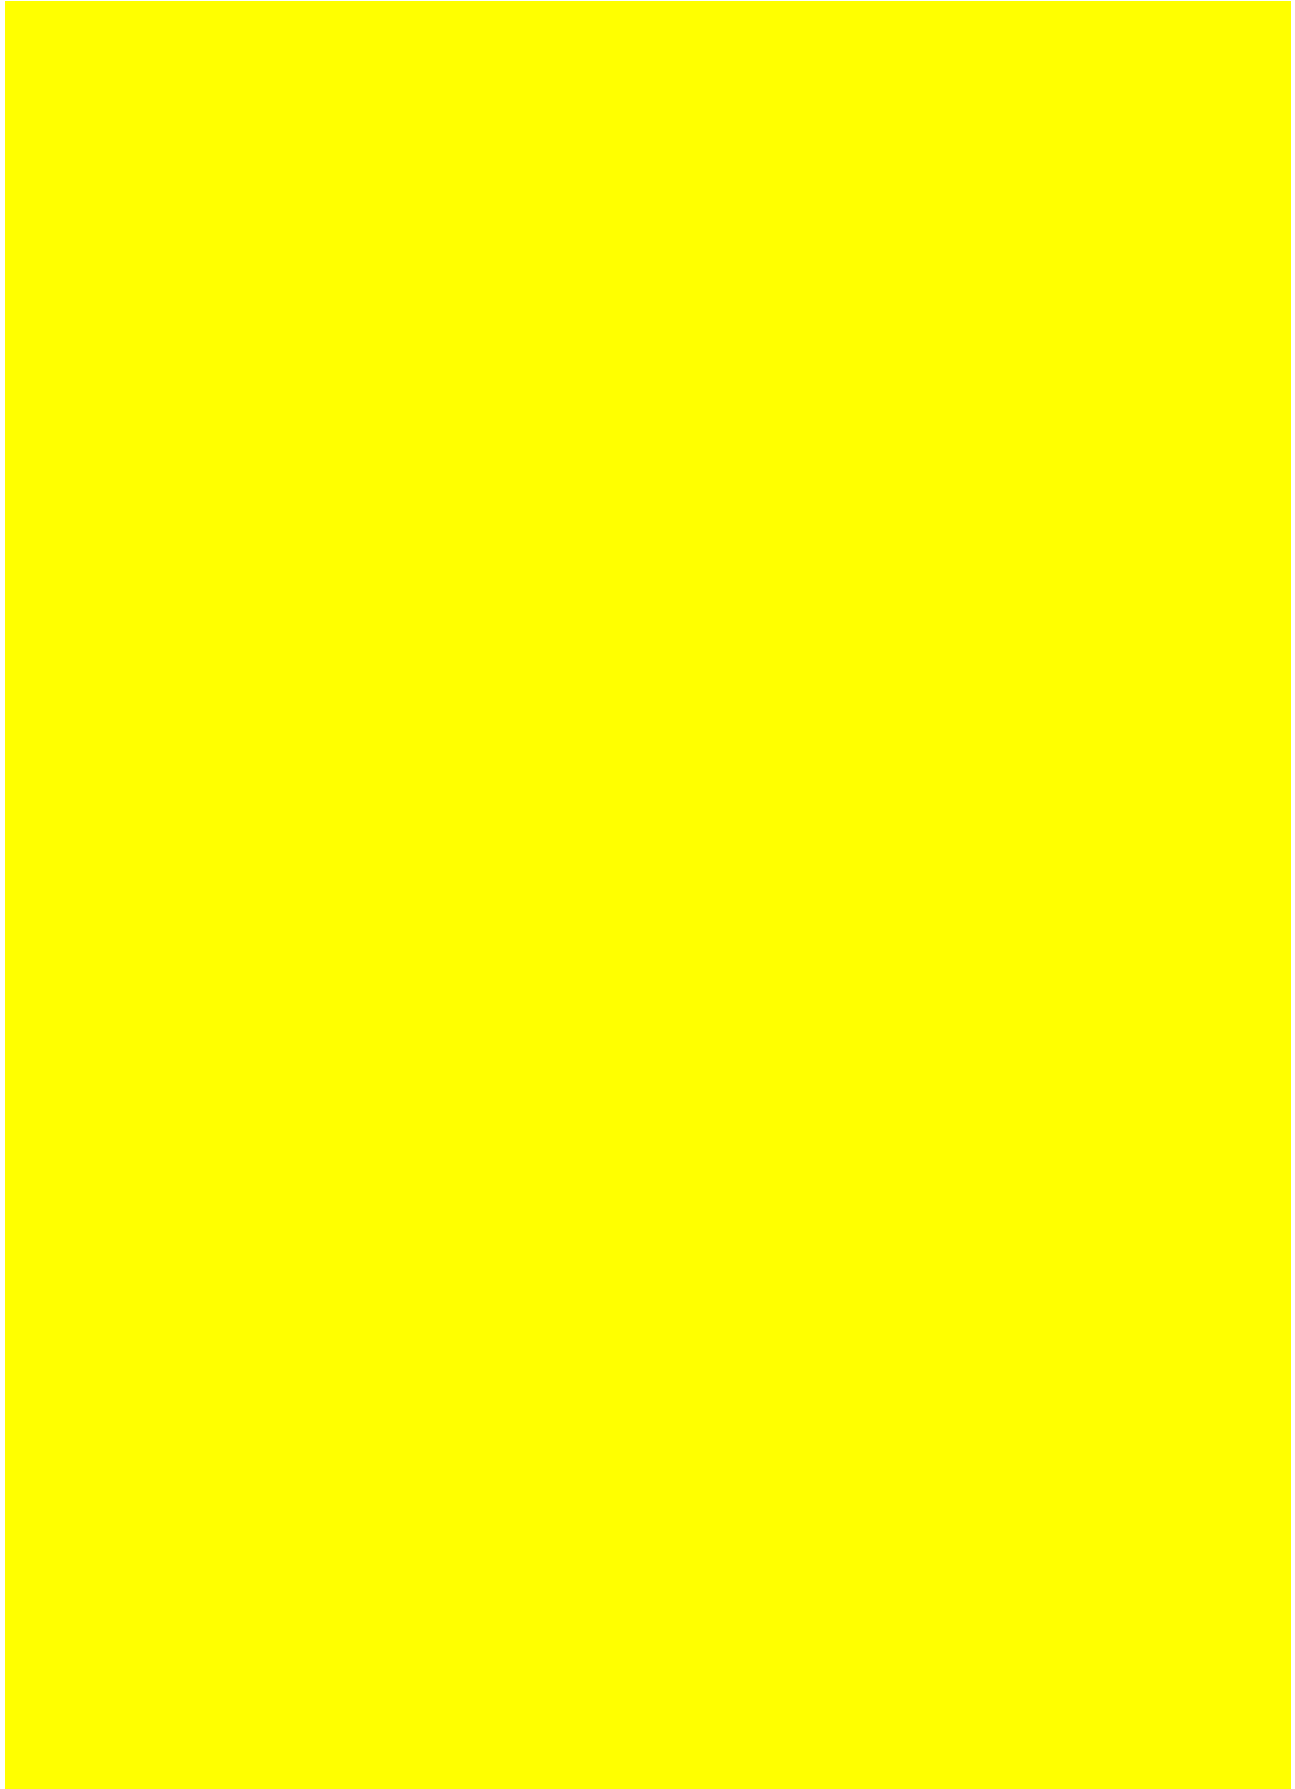

Cyan

Magenta

Yellow

Black
